ACT81002 Alibaba Cloud Technical Operations

Course Description

"Alibaba Cloud Technical Operations" is a course designed to enable Developers, Technical Operators, Solution Design Engineers with the deployment and management skills of core Alibaba Cloud products. The course covers the specific Alibaba Cloud features and tools for configuration and deployment. Moreover, it includes a number of intuitive online labs led by experienced instructor that can help you obtain direct hands-on experience.

Course Objective

This course is designed to cover the following topics:

- Understand the characteristics of Alibaba Cloud products (like ECS, SLB, RDS, OSS) and how they should be operated to perform certain tasks
- Learn how to configure a set of ECS instances that launch behind a load balancer, with the system scaling up/down according to real world demand
- Learn how to enclose resources in virtual private networks with VPC
- Understand the fundamental architecting design concept by putting ECS/SLB/RDS/OSS together

Intended Audience

- Cloud Developers that are interested in Alibaba Cloud
- Technical Operator, Solution Design Engineer that aim to adopt Alibaba Cloud

Course Outline

- Alibaba Cloud Services Overview
- Elastic Compute Service (ECS)
- Server Load Balancer (SLB)
- Object Storage Service (OSS)
- Relational Database Service (RDS)
- Q & A

Hands-on Lab

ECS, SLB, RDS, OSS

Duration

1 Day
